Tulane second-year students Helen Weierbach, center, and Sian Grosskopf, right, discuss *Landen Density*, artwork by Katherine Strasser and Victor Moll, left, professor of mathematics, at the opening of the 2017 Computational Art Show. Sponsored by the [Center for Computational Science](#), the annual exhibit features computer-generated works that illustrate current research across the fields of bio-mathematics, physics, epidemiology, biology, physiology and engineering. Produced by the center's students, researchers and faculty, the artwork is on display throughout the year on the fourth floor of Stanley Thomas Hall.
