EPISODE 39 - Artificial intelligence is everywhere, and it's getting smarter. It's driving cars, screening resumes, monitoring surveillance networks and even helping doctors make medical diagnoses. How do we make sure such a powerful tool doesn't become a threat? Tulane computer scientist Nicholas Mattei is a co-author of *Computing and Technology Ethics: Engaging through Science Fiction*, a book coming out this fall about the growing field of AI ethics. Mattei talks about the risks when developers don't ask the right questions and whether AI has the potential to take over if we're not careful.

Host: Keith Brannon

Editor: Cooper Powers

Producer: Audrey Burroughs

Production team: Marianna Boyd, Keith Brannon, Audrey Burroughs, Chelsea Christopher, Faith Dawson, Roger Dunaway, Aryanna Gamble, Becca Hildner and Roman Vaulin
