

CS Professor Jihun Hamm organizes AI outreach program

|

[View PDF](#)

Dr. Jihun Hamm (Associate Professor, Computer Science) has recently organized (along with Edward Choi) an [AI outreach program](#) for Louisiana college students. This was part of the [NeurIPS conference](#), the largest cutting-edge AI conference, which took place in the New Orleans convention center last week with more than 13,000 attendees. The vision for the outreach program was to engage local undergrad/grad students to learn about current advancements of AI, how AI will change the future, and how they can be a part of the change and not bystanders. The program selected and invited ~100 faculty and student participants with full access to the conference and workshops. During the conference, Dr. Hamm had a short [interview](#) with the host of the local radio channel about the program and the future of AI.
