Tulane University's neuroscience major celebrated its 25th anniversary this Friday, welcoming back graduates and professors for a day of reminiscing.

The major came into existence in 2000 by popular demand, with a surge of designed majors in neuroscience appearing in the late 1990s. After its founding as an official program – the third of its kind in the country – the undergraduate major quickly grew to be one of the most popular and successful at the university, with 1,848 total graduates as of this year.
