Michael Naguib, a respected **professor at Tulane University**, has been recognized as a **2025 Highly Cited Researcher** by **Clarivate**, one of the most prestigious global honors in academic research. This designation places him among the world's **most influential scholars**, whose work ranks in the **top 1% of citations** in their fields, reflecting significant impact and influence in the broader scientific community.

In announcing this recognition, Naguib expressed pride in *representing Tulane* on the list for the **fifth consecutive year**, underscoring both his sustained research

excellence and the continued strength of Tulane's scholarly community. He highlighted that this achievement is shared with his **students, collaborators, and mentors**, acknowledging the collective effort and support that drives research breakthroughs.

The **Highly Cited Researchers program** is an annual Clarivate initiative that identifies researchers whose publications have received exceptional citation levels over more than a decade. In 2025, thousands of researchers from around the world were selected based on rigorous citation metrics drawn from the **Web of Science Core Collection**, complemented by additional quantitative and qualitative evaluation.

Recognition as a Highly Cited Researcher is widely regarded as one of the clearest indicators of research influence, as citation frequency signals that the work has deeply resonated within the academic community. For Naguib, this honor not only celebrates his individual contributions to science but also the collaborative and innovative spirit of his research team and Tulane University.
