TURE participants will learn how to present and create research posters.

This summer, a new undergraduate opportunity is available to students across the United States through the U.S. National Science Foundation's Research Experiences for Undergraduates (NSF-REU) program at Tulane University. The program reflects NSF's recognition that the nation needs scientists who possess technical depth and the ability to translate research into solutions.

The [Tulane Use-Inspired Research and Entrepreneurship Program \(TURE\)](#), based in the School of Science and Engineering and offered in partnership with the Tulane Innovation Institute, will provide a paid, 10-week summer experience that connects rigorous research with practical outcomes. Selected students will receive a \$7,000 stipend, on-campus housing and travel support.
